HYDROMETEOROLOGY AND REMOTE SENSING LABORATORY

- ▶ Data Assimilation
- ▶ Quantitative Precipitation Estimation
- ▶ Flash Flooding and Landslides
- ▶ Remote Sensing

- ▶ 29 researchers
- ▶ Over 100 publications
- ▶ Product development
 - ▶ Global
 - ▶ National
- ▶ Partners around the world

Faculty and Scientists

WORKING TOGETHER IN WATER, WEATHER, AND CLIMATE

Postdocs and Visitors

Graduate Students

Plus several undergraduate students and over 40 alumni.....

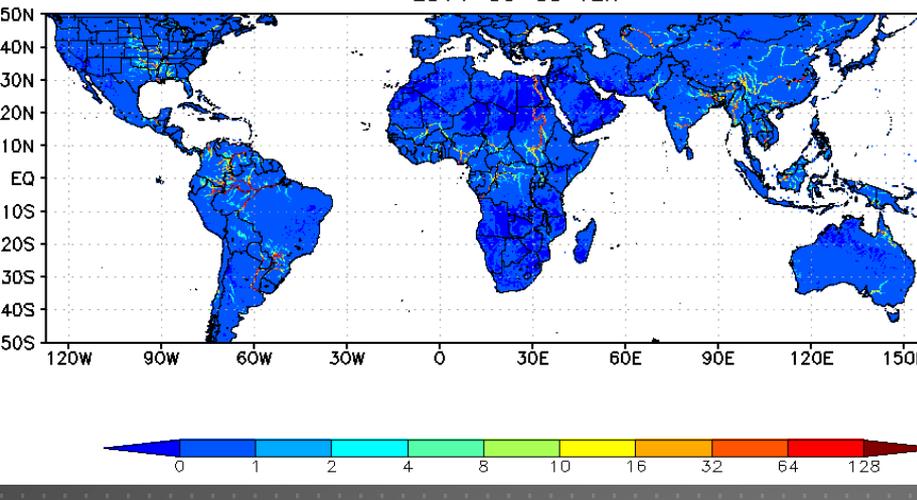

PROJECT BACKGROUND

- ▶ NASA SERVIR - project with USAID to use satellites to help developing nations improve “environmental decision making”
 - ▶ Weather forecasts, flood forecasts, drought monitoring...
- ▶ CREST is a joint development between NASA and OU
- ▶ Namibia has highly variable climate; mostly arid or semi-arid; lots of floods and droughts

GLOBAL HYDROLOGIC MODELING

2014-06-09 12h

Latest 24h/3h Stream Flow (m^3/s)

2014-06-09 12h

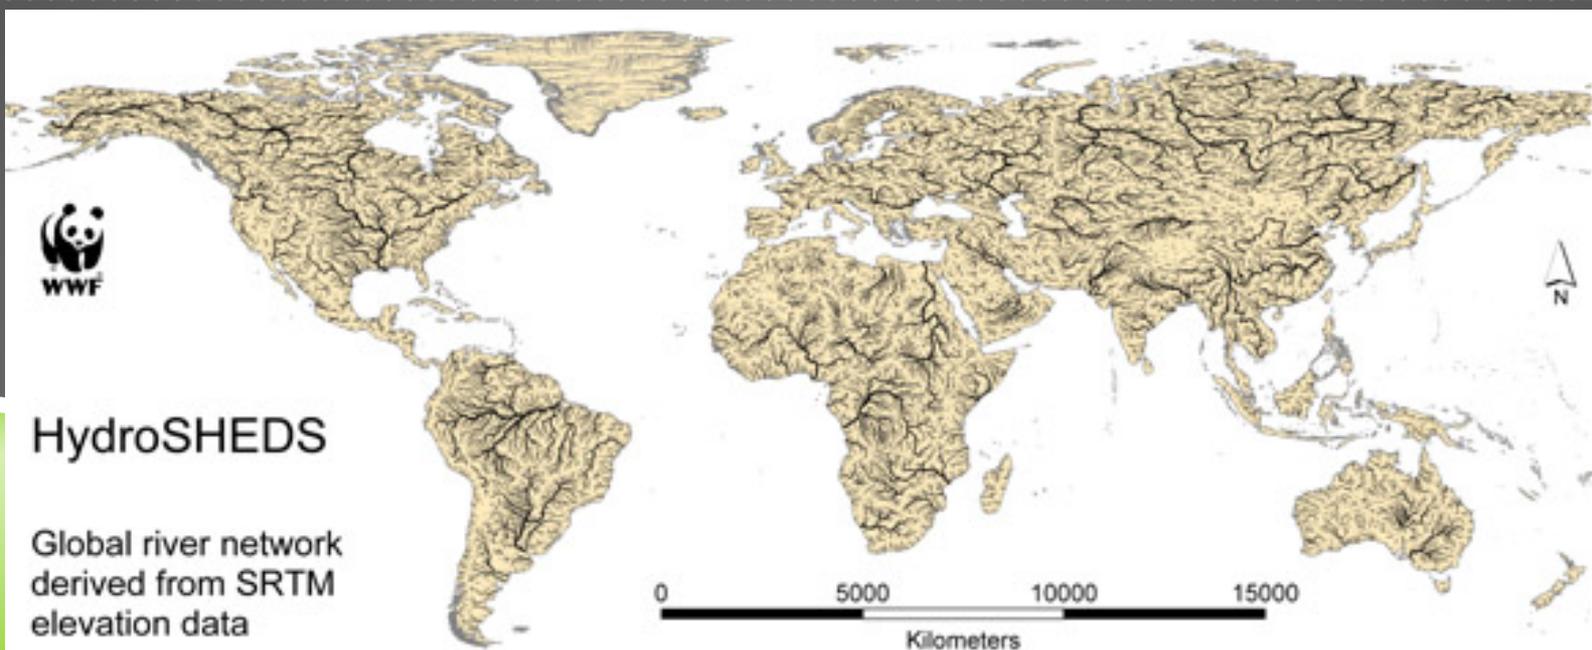

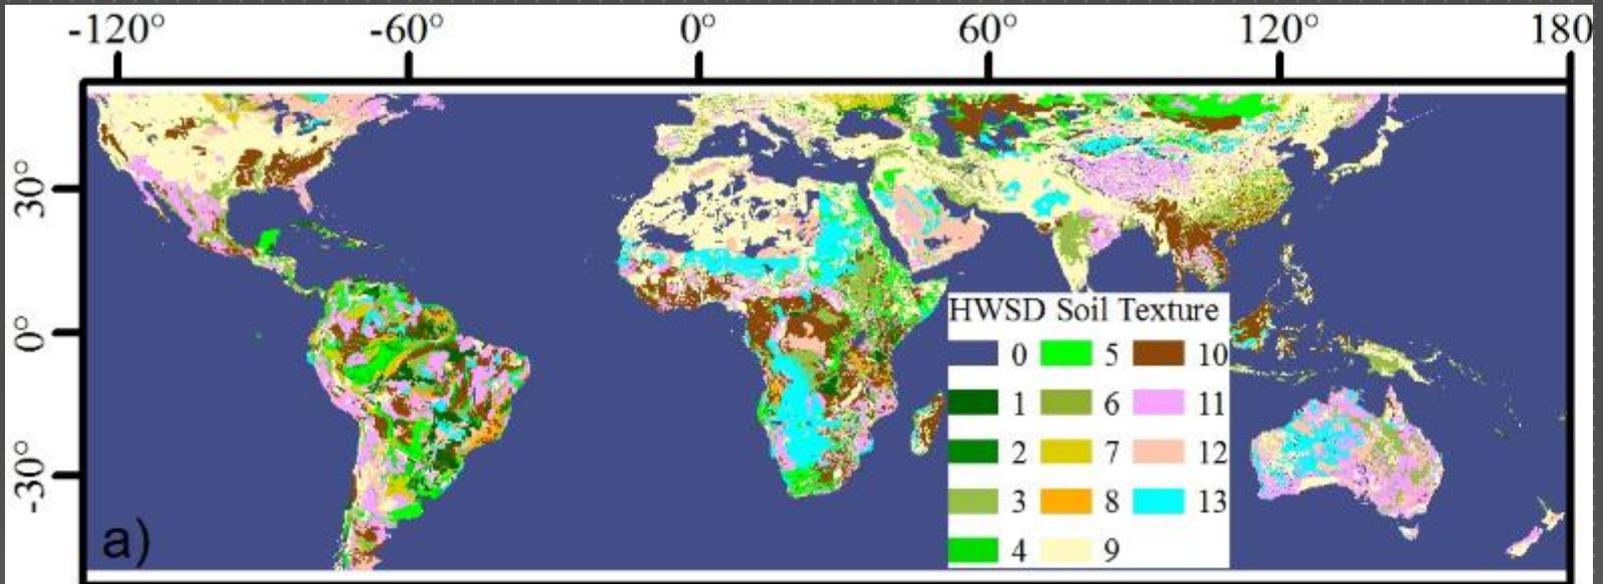

CHALLENGES

- ▶ Resolution
 - ▶ Temporal: every 3 hours
 - ▶ Spatial: 0.25 deg latitude and longitude (~110 km at equator)
- ▶ Background data missing or incomplete
- ▶ Lack of observations (only six gauges) →
- ▶ No rain gauges
- ▶ Ephemeral rivers
- ▶ Endorheic rivers

HYDROLOGICAL SERVICES NAMIBIA- DAILY FLOOD/ HYDROLOGICAL DROUGHT BULLETIN: 09 JUNE 2014

Water Levels

See figures in the table below with readings from our Telemetry Stations, site informants, and the satellite-based SADC Hydrological Cycle Observing System (SADC-HYCOS) Data Collection Platforms (DCPs). You can read more about SADC-HYCOS here <http://sadchycos.dwaf.gov.za/about%20us.aspx>.

River	Site	waterlevels (m)			
		one week before	one day before	Today	normal for
		01-Jun-2014	08-Jun-2014	09-Jun-2014	09-Jun
Zambezi	Katima Mulilo	4.87	4.42	4.35	3.13
Chobe	Ngoma Gate	3.80	3.46	3.45	
Kwando	Kongola			2.81	2.59
Kavango	Rundu	5.35	5.10	5.07	4.69
	Mukwe	3.44	3.32	3.30	
Cuvelai North East	Shahaingu	0.42	0.42	0.42	
Cuvelai North west	Shanaibwengendje	0.35	0.35	0.35	
	Shapoko	0.49	0.49	0.49	
Cuvelai South West	Shashuli	0.03		0.14	
	Otwana	0.01		0.00	
Cuvelai Main	Okatana	0.33	0.28	0.27	
	Gobabeb	0.00	0.00	0.00	
Kuseb River	Schlesien	0.00	0.00	0.00	
Orange	Upington (**)	0.77	0.64		
	Ruacana	2.31	2.27	2.17	
Kunene	Ruacana flow (m ³ /s)				
	(**)				

(-) Information by courtesy Riazin Rester

(+-) Information by courtesy Kambugu Steven

(*) Information by courtesy Simone Micheletti

(-) Information by courtesy NamPower – averaged flow through turbines (plus any flow over diversion weir)

(=) reading downstream in river – affected by daily fluctuations resulting from NamPower operations for flows < 300 m³/s

(*) Information by courtesy DWA South Africa – Orange/Vaal confluence

(**) Information by courtesy DWA South Africa

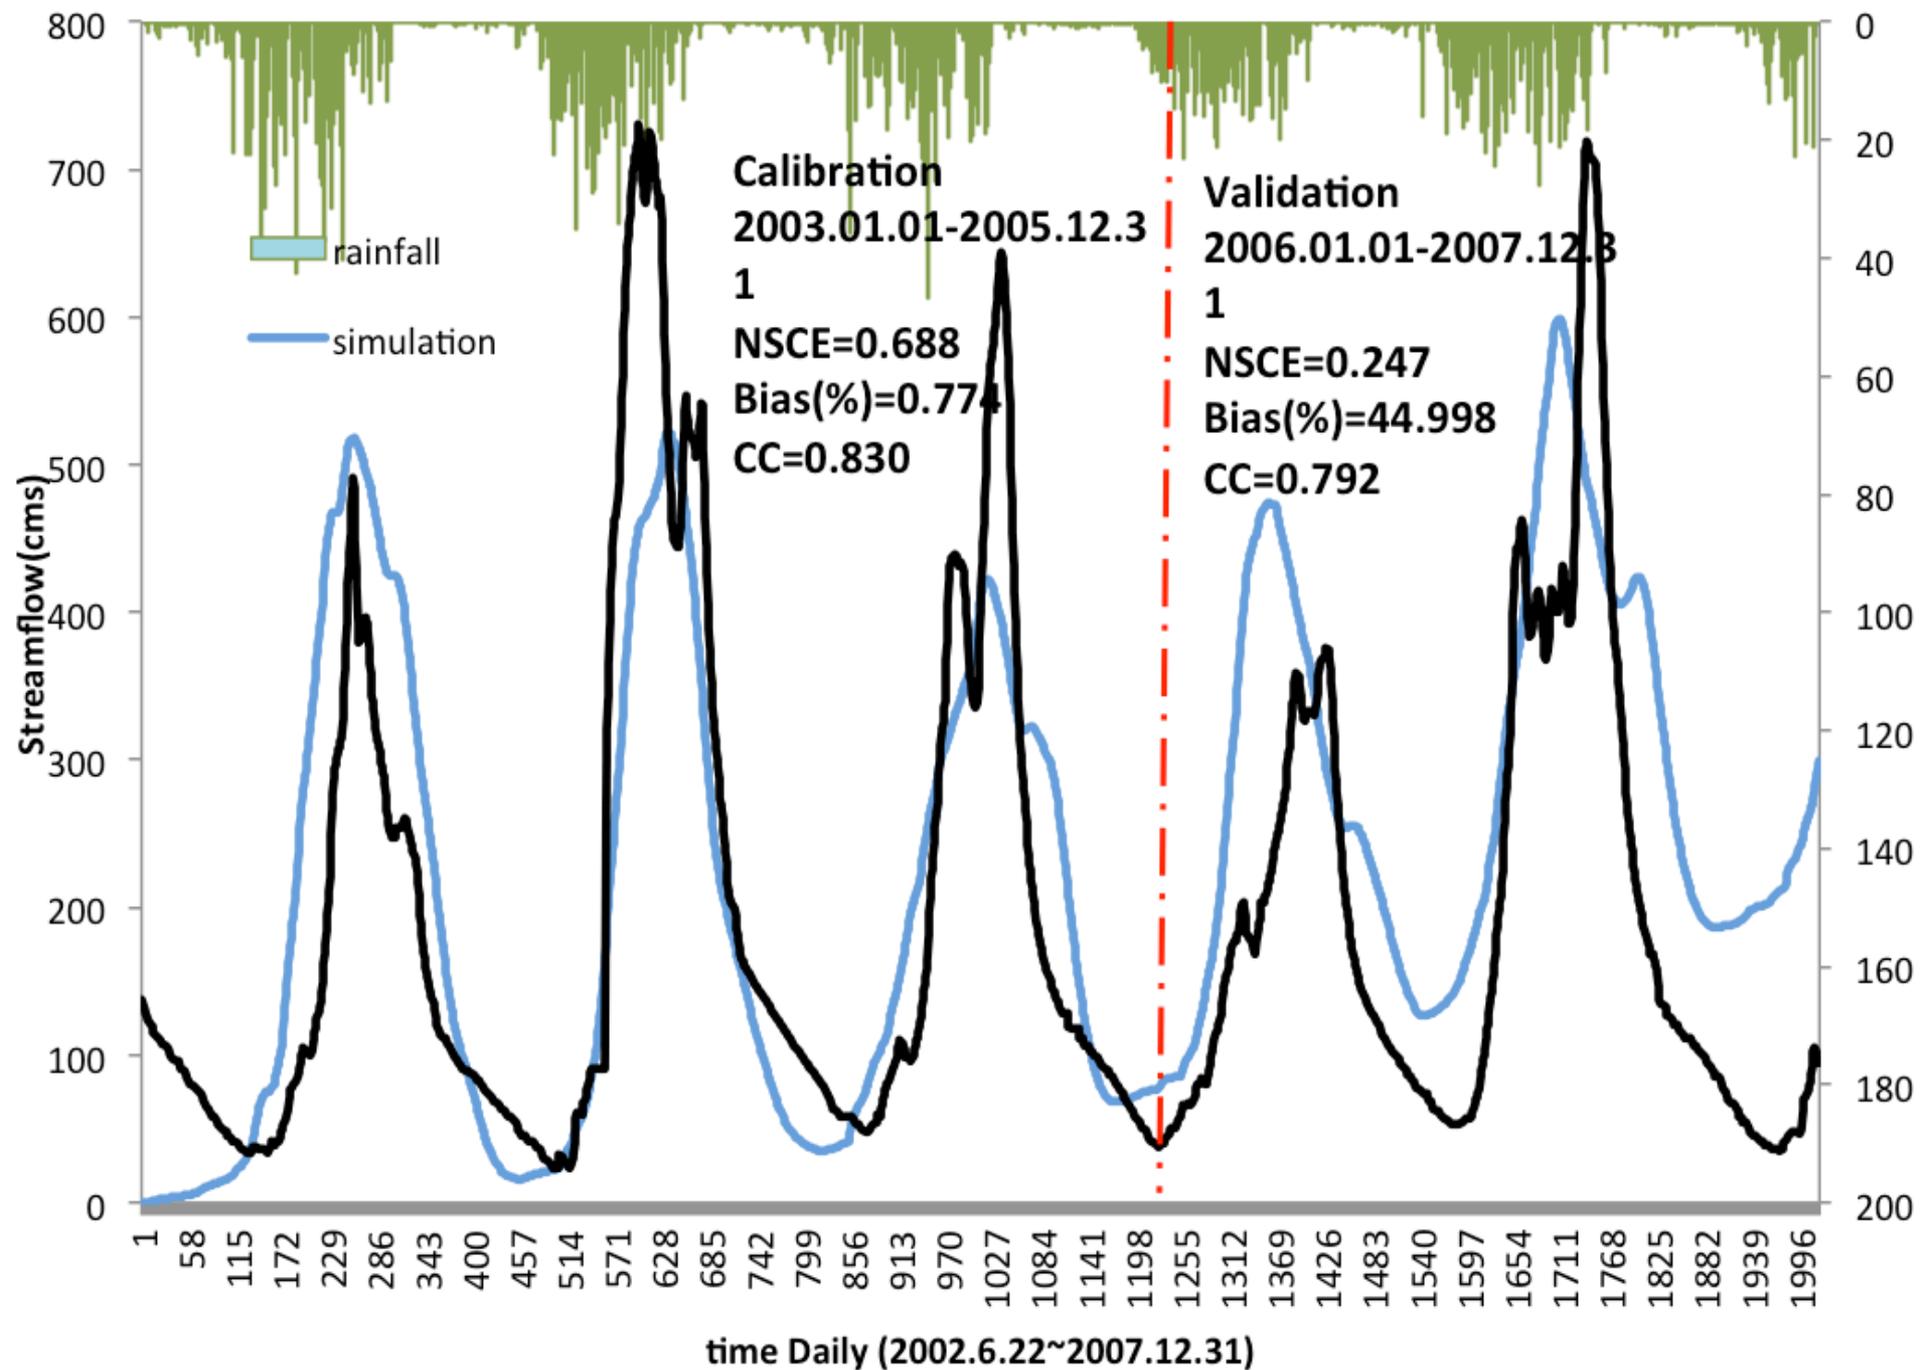

A useful site for a range of disaster related information in Namibia:

Directorate Disaster Risk Management <http://www.ddrm.gov.na/>

Feel free to share with us any hydrological information in your areas. **Please put new information under a separate heading/subject.** We would also like to thank everyone that has been sending us data, and please continue to do so

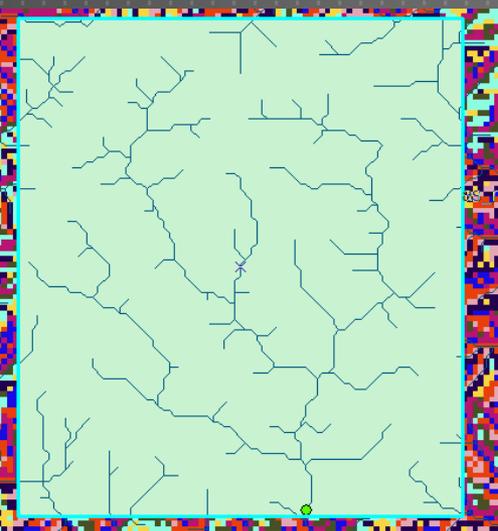

You can also view past and present daily flood bulletins and other flood information on Namibia at NASA's Namibia Flood

Dashboard <http://matsu.opencloudconsortium.org/namibiaflood>

NAMIBIA FLOOD DASHBOARD

- ▶ Next steps include
 - ▶ CREST near-real-time forecasts for major river basins (6-12 hours)
 - ▶ Remote training (MOOC)
 - ▶ Higher-resolution distributed CREST over all of northern Namibia
 - ▶ Develop CREST examples in the cloud →

CREST TRAINING

- ▶ Multiple courses
 - ▶ Each roughly 40 hours or one week of full days
 - ▶ Lectures, practical examples, field work (?), worksheets, videos
- ▶ May use OU MOOC system
- ▶ Post materials on Dashboard
- ▶ Will also use manuals and journal articles
- ▶ Course I completed February 2014 Namibia
- ▶ Course II tentatively planned January 2015 Namibia
- ▶ Course I may be re-taught (partially) at University of Oklahoma – Spring 2015

CREST TRAINING

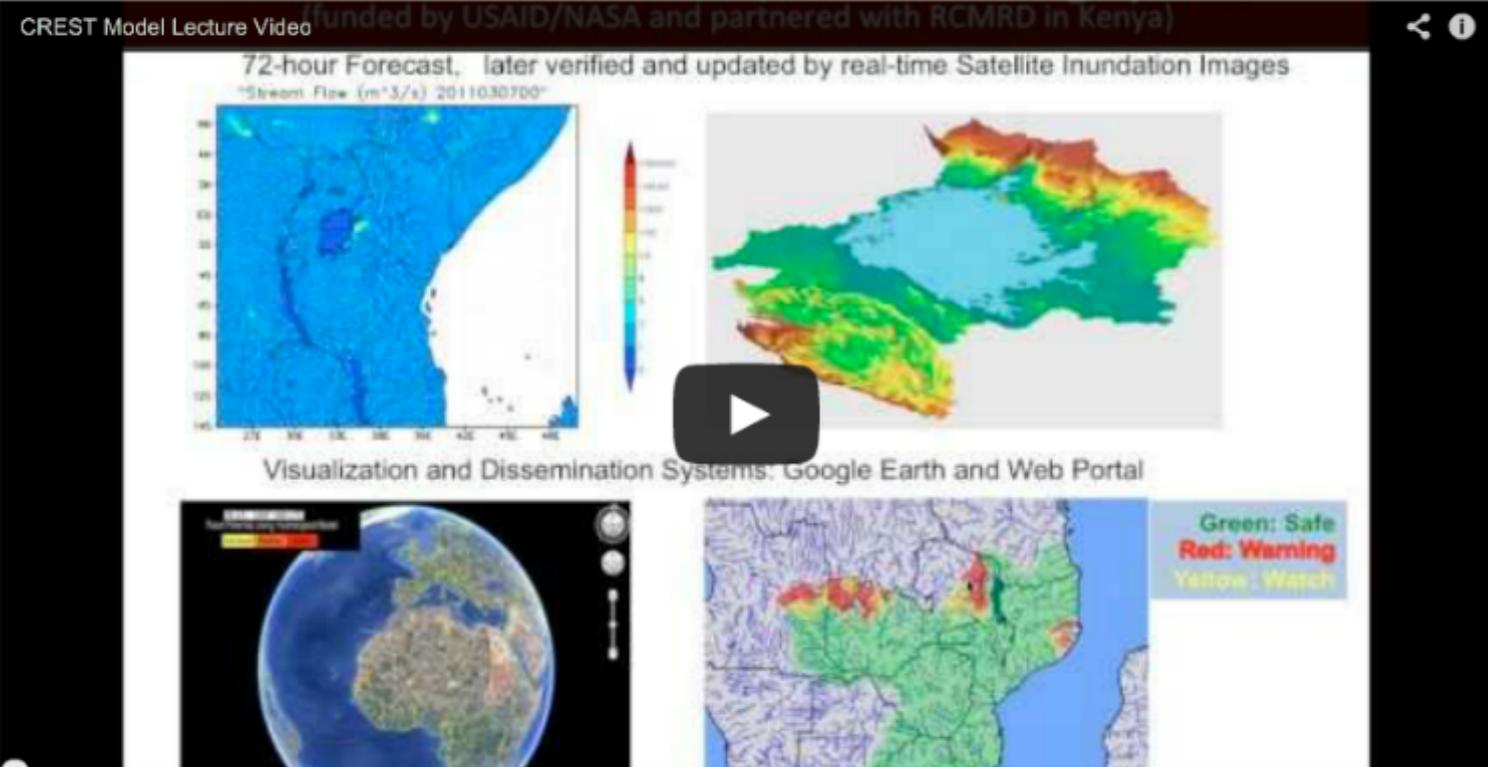

- ▶ Some areas aren't amenable to in-person training
 - ▶ Pakistan
- ▶ Alternative is a training video or YouTube
- ▶ Easier to use with slow Internet connections in some countries

CREST Model Lecture Video

CREST Model Lecture Video (funded by USAID/NASA and partnered with RCMRD in Kenya)

72-hour Forecast, later verified and updated by real-time Satellite Inundation Images

SCHEDULE

- ▶ Day 1 & 2 Flood and Drought Risk Management Workshop
- ▶ Day 3
 - ▶ Overview of CREST and hydrologic modeling
- ▶ Day 4
 - ▶ Data used in CREST
 - ▶ CREST applications (US, globally, other regions)
 - ▶ Running CREST (Wangchu basin, China)
 - ▶ Using CREST with relative referencing and batch files
 - ▶ Manual and automatic calibration
- ▶ Day 5
 - ▶ Visualization in Microsoft Excel (hydrographs)
 - ▶ Visualization in ArcGIS
 - ▶ Downloading/using DEMs, FACs, and FDRs
 - ▶ Running Okavango calibrated example
- ▶ Day 6
 - ▶ Field Campaign to update EO-1 images for gauges in Kuiseb River Basin

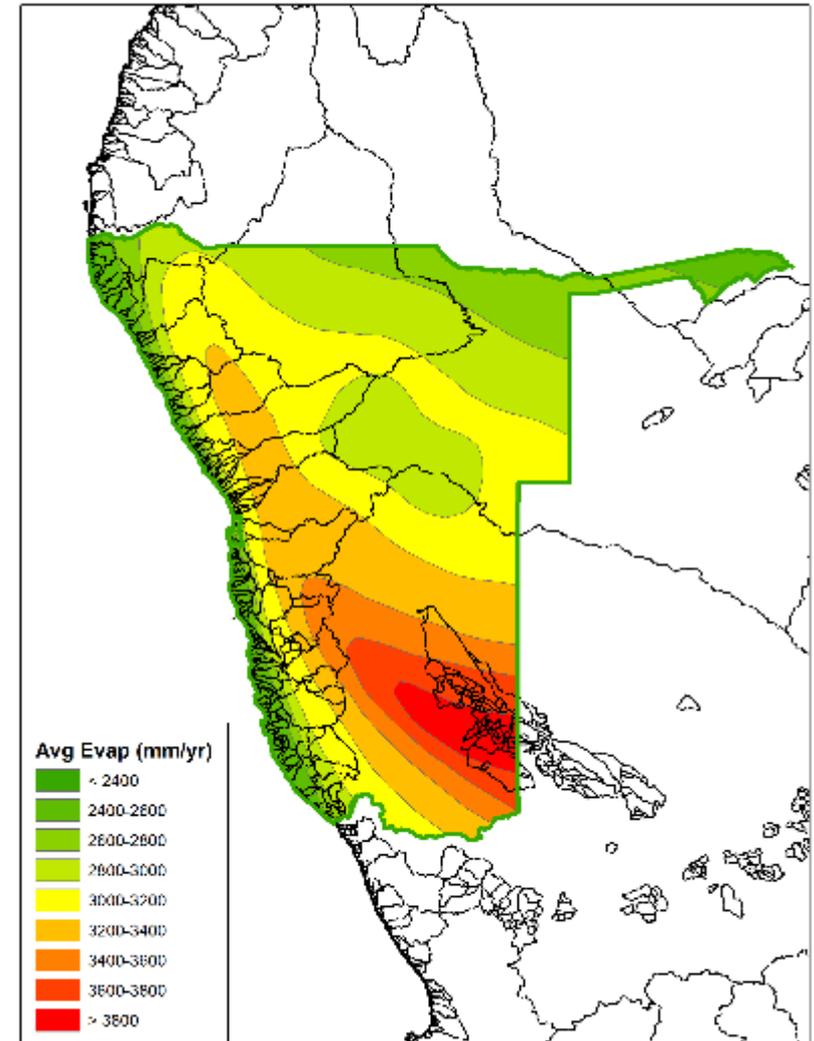

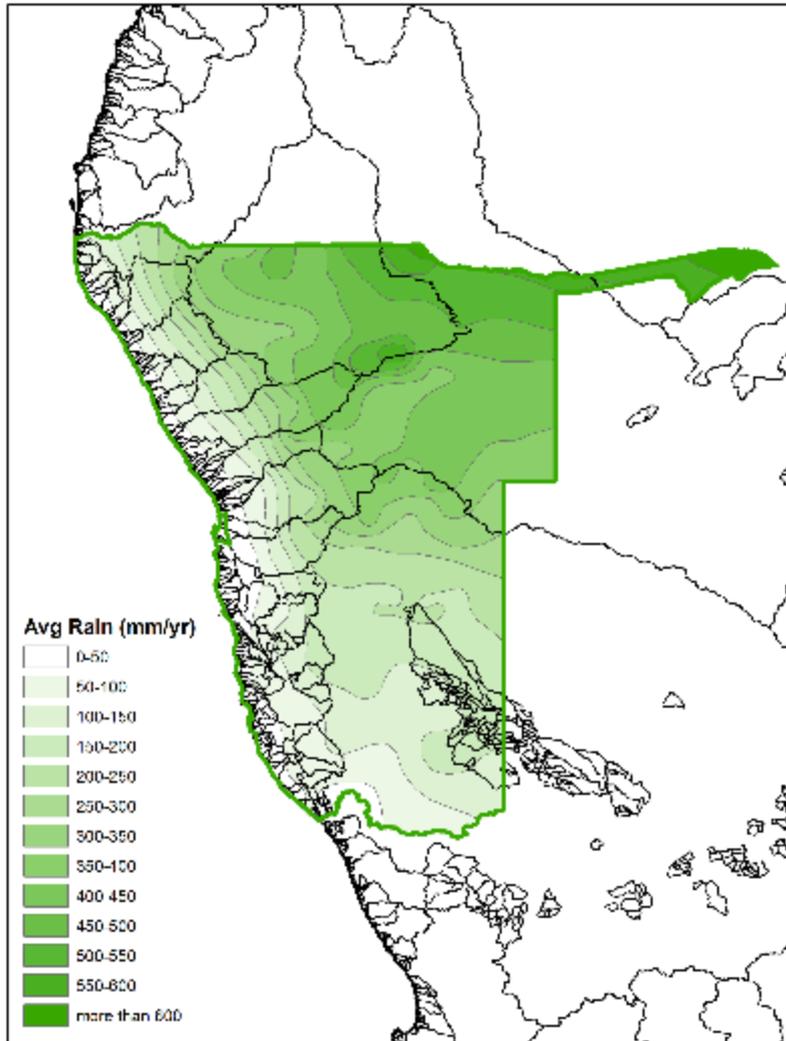

NAMIBIA

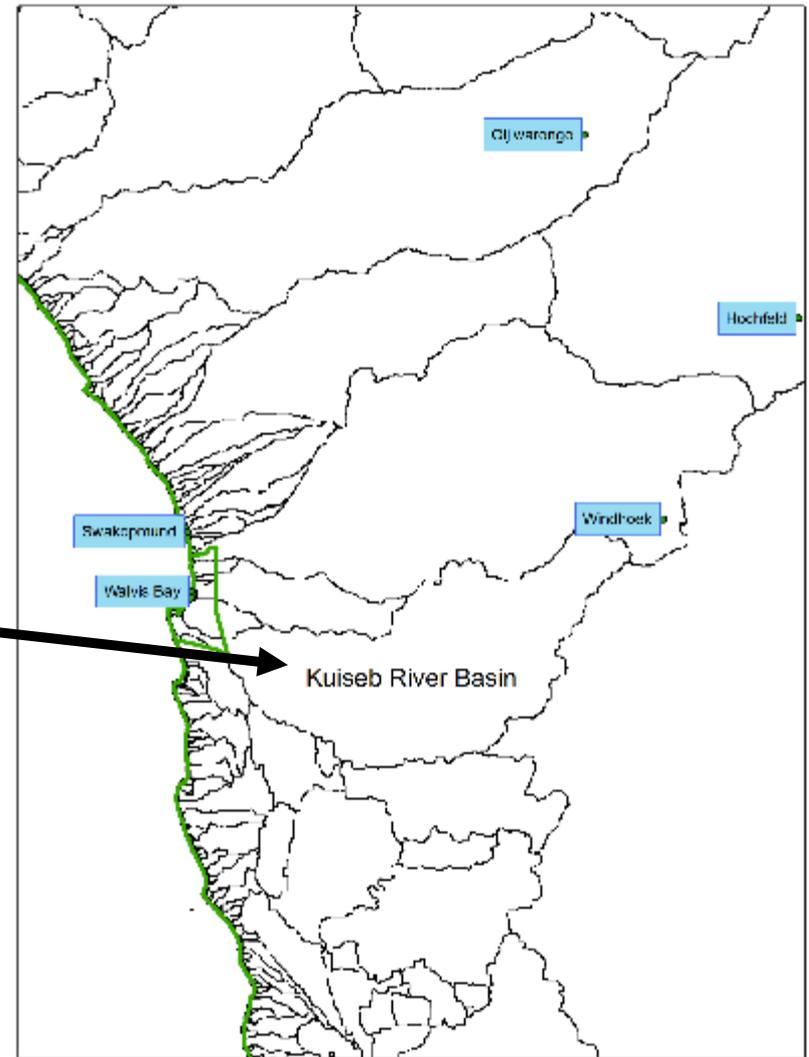

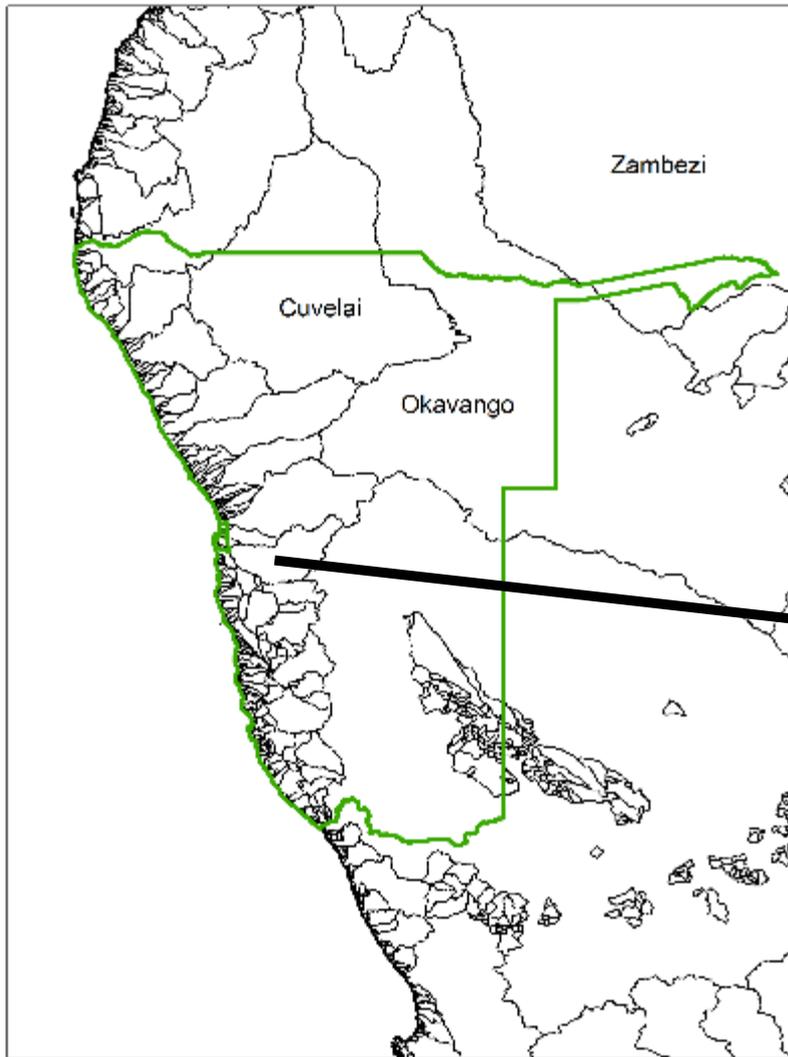

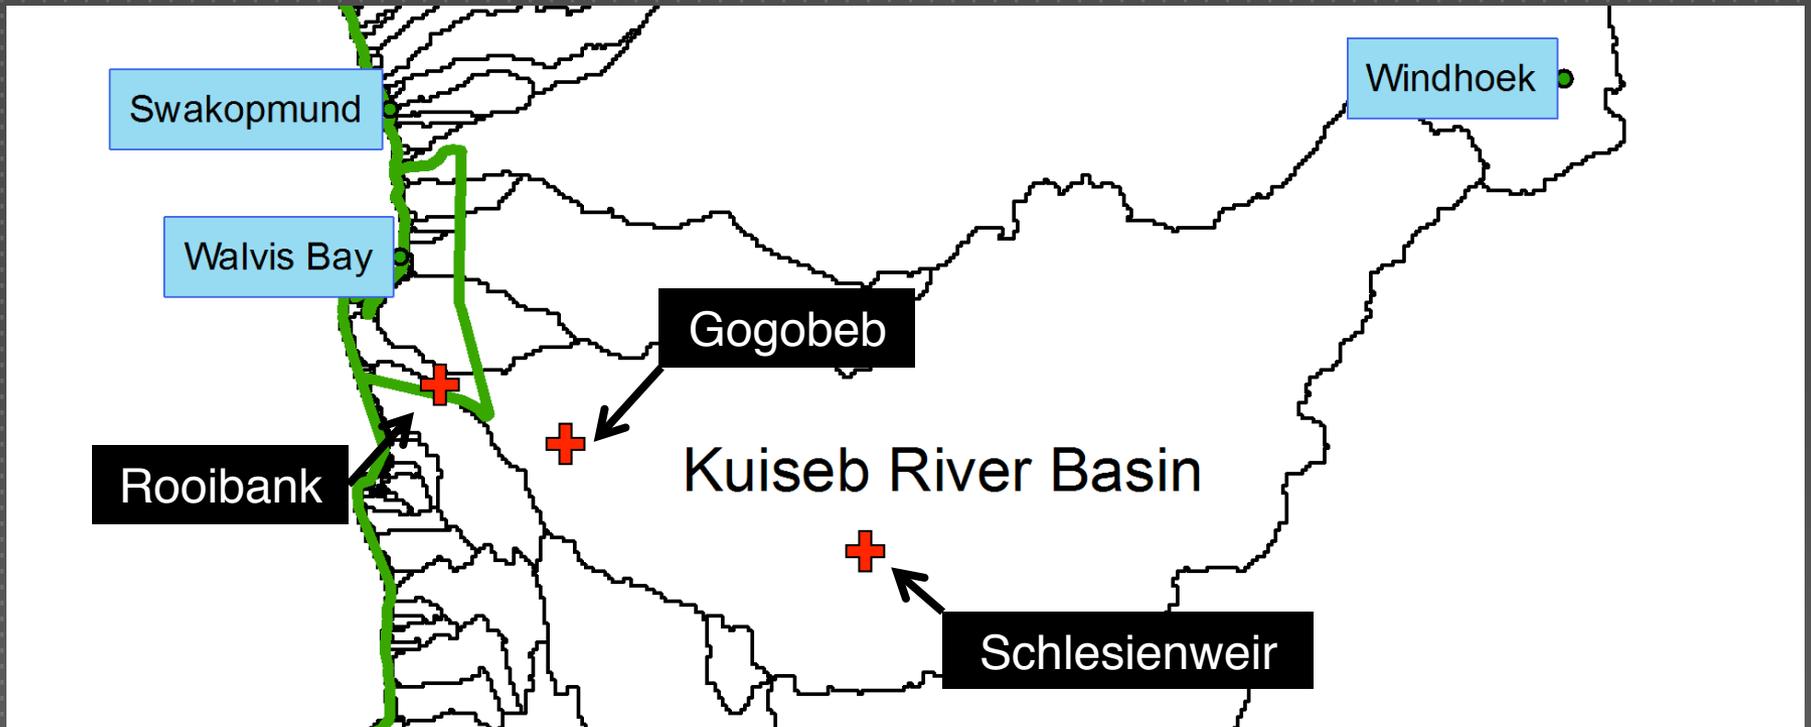

WHY NAMIBIA?

- ▶ Independence from South Africa in 1990
 - ▶ Ministry of Agriculture, Water, and Forestry
 - ▶ Department of Hydrology (~50 employees?)
 - ▶ Part of the Directorate of Resource Management
 - ▶ Past head, Guido Van Langenhove, recently passed away
 - ▶ Loss of institutional knowledge
 - ▶ Good time to learn CREST?
- 

NAMIBIA'S HYDROCLIMATE

- ▶ Gauge station along typically dry river bed (has water usually less than 10 days per year)
- ▶ Middle of Namib Desert but near coast
- ▶ Source of groundwater for Walvis Bay
- ▶ Namwater operates a station, tanks, and several boreholes
- ▶ Inhabited by Topnaars – live in desert, speak click language, sell nara seeds

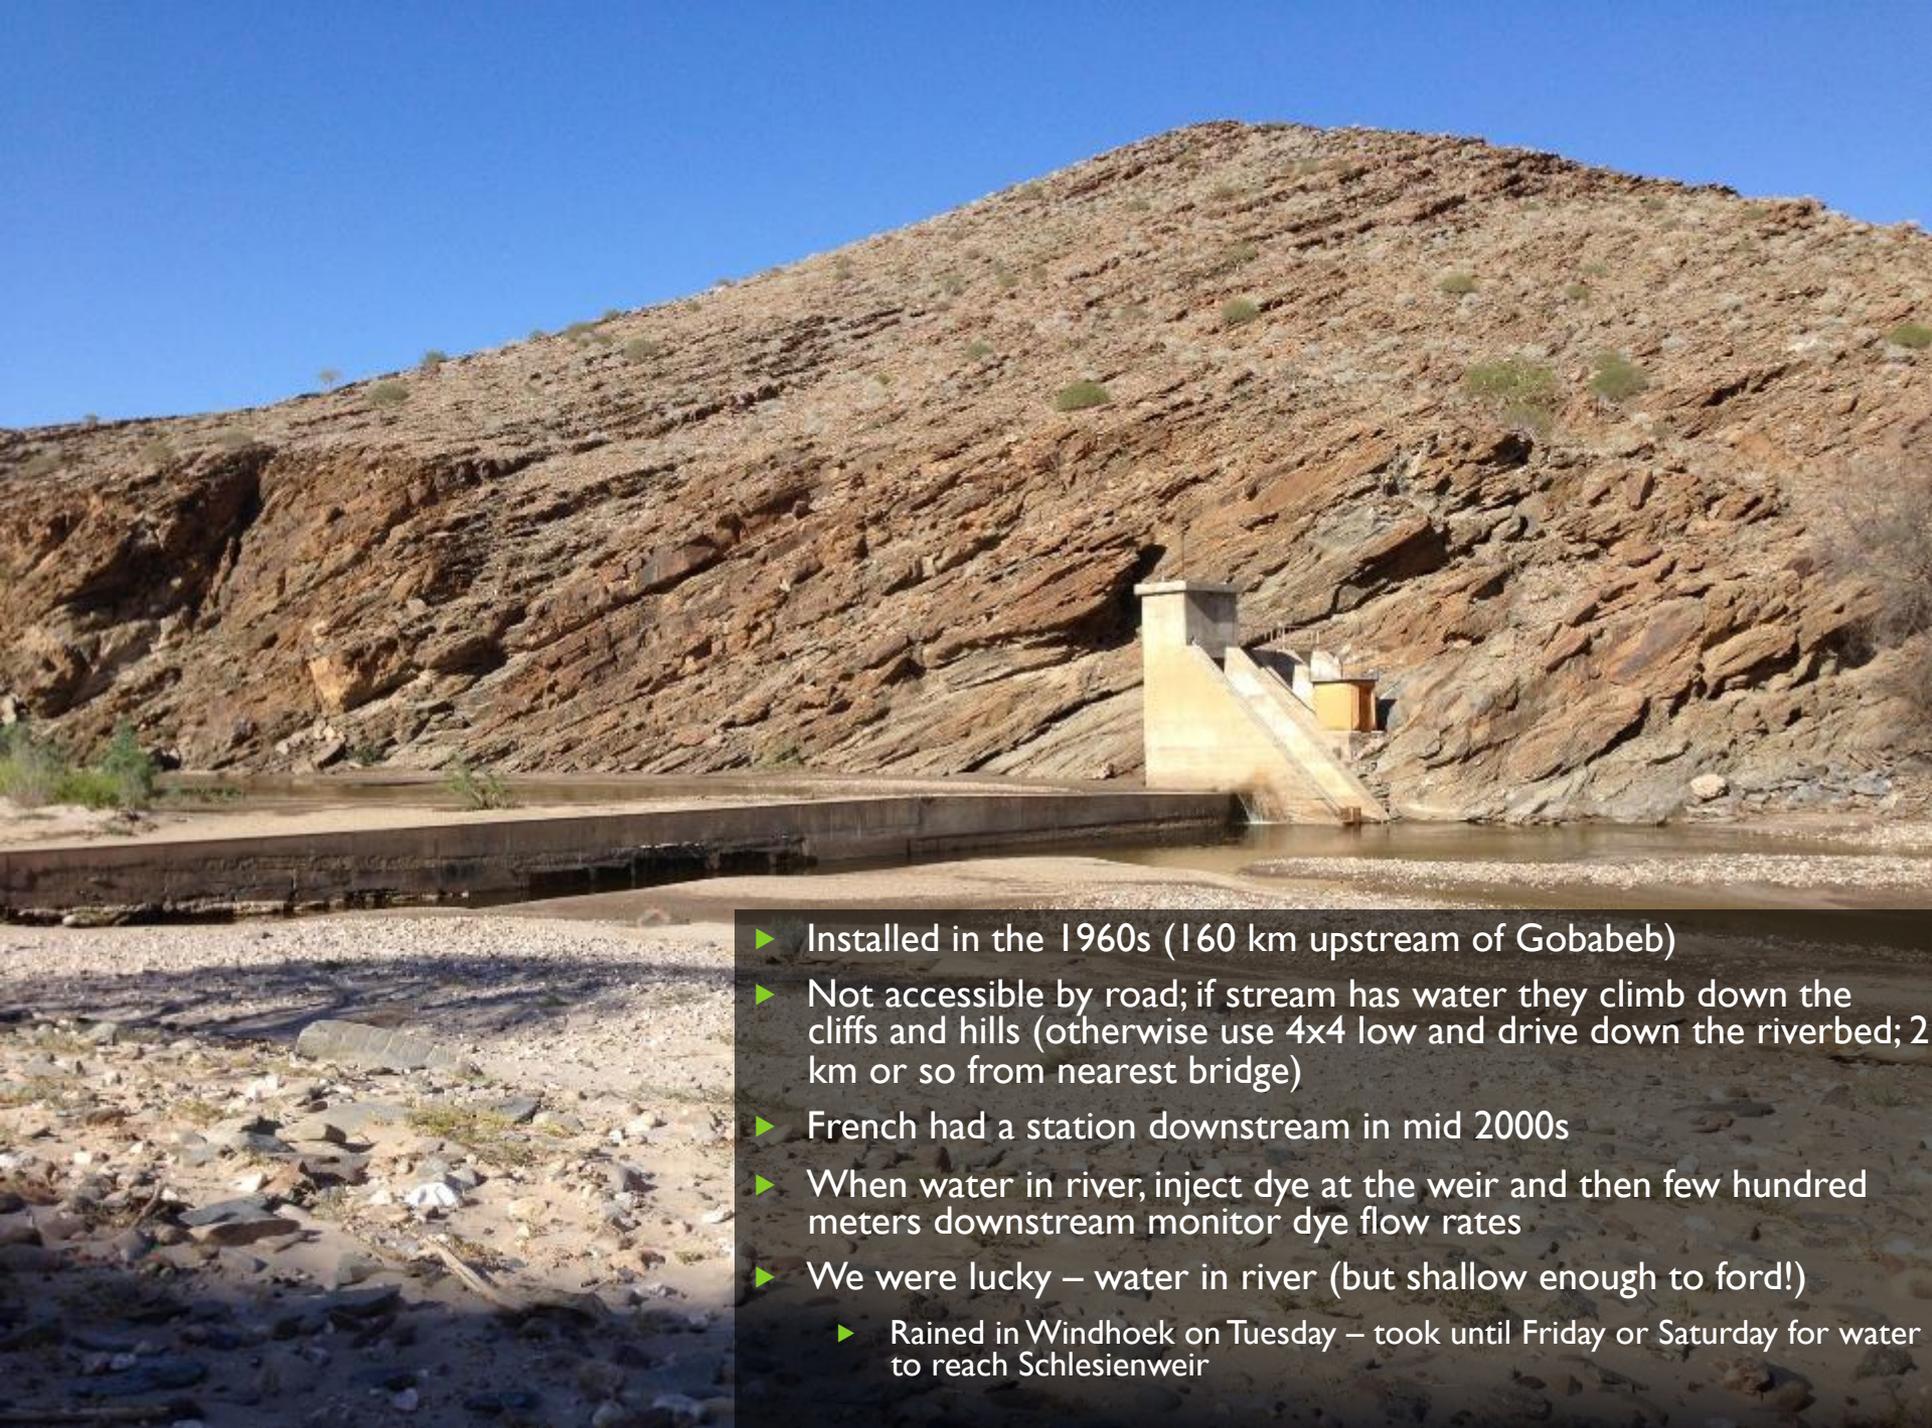

- ▶ In case you get lost in the desert, signage is always available

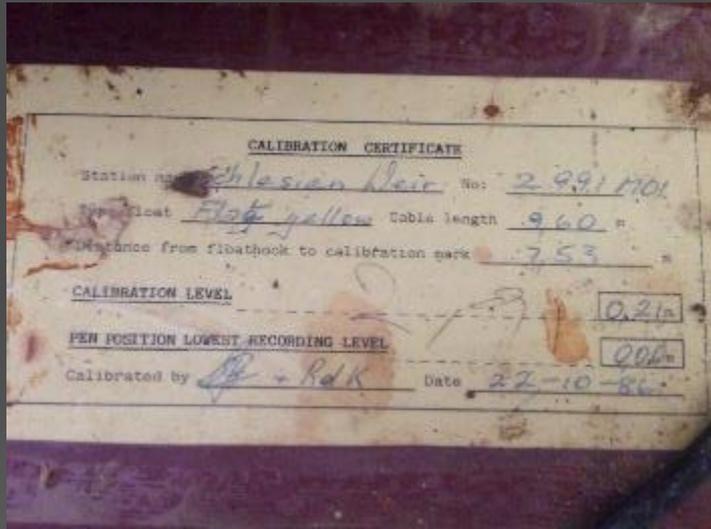

- ▶ 120 km SE of Walvis Bay
- ▶ A river gauge station operated by Hydrology Dept (and another for Namwater)
- ▶ Gauge installed in the 1970s; telemetry since 2012
- ▶ Communicates via EUMETSAT
- ▶ Water has not ever reached the gauge house but record gauge datum is over 3 meters
- ▶ Tourism Dept/Desert Research Foundation has a research station nearby

- ▶ Installed in the 1960s (160 km upstream of Gobabeb)
- ▶ Not accessible by road; if stream has water they climb down the cliffs and hills (otherwise use 4x4 low and drive down the riverbed; 2 km or so from nearest bridge)
- ▶ French had a station downstream in mid 2000s
- ▶ When water in river, inject dye at the weir and then few hundred meters downstream monitor dye flow rates
- ▶ We were lucky – water in river (but shallow enough to ford!)
 - ▶ Rained in Windhoek on Tuesday – took until Friday or Saturday for water to reach Schlesienweir

TECHNOLOGICAL CHALLENGES

- ▶ Outdated equipment (I had never seen *actual* hydrograph paper)
- ▶ Old calibrations
- ▶ Hard-to-reach stations
- ▶ Sandy stream channels

► Gamsberg Pass
